

think:

chemical engineering at
Case Western Reserve University

Our researchers are tackling today's toughest challenges in energy, materials and biomolecular engineering

Energy

- Energy storage for transportation, grid storage, and portable applications
- Energy efficient materials processing
- Batteries and Fuel cells

Materials

- Materials for electronic and electrochemical devices
- Electrochemical and plasma reactors
- Materials engineering at molecular through macro scales
- Advanced separations processes

Biomolecular Engineering

- Biosensors
- Cell and tissue engineering
- Biocatalysis and protein engineering

For more information about research opportunities, admission and financial support, email chemeng@case.edu or visit engineering.case.edu/eche
